QGIS

**QGIS** tool used to load shape files into postgres
Start by adding the **postGIS** extension: **CREATE EXTENSION postgis;**

**1.** Create a new connection to postgresql
- **PostGIS > New Connection**

2. Load shape file
- **Layer > Add Layer > Vector Layer**
- **Ctrl + Shift + V**

3. View loaded shape file

4. QGIS output on adding all shape files

5. Save shape file data to a table
- **Database > DB Manager > (Select Public Schema) > Import Layer File**

6. On importing all shape files, proceed to **pgAdmin** for analysis
